

```
/* Main program:
 *   Using the various functions
 */
```

```
/*
 * The function get:
 *
 * The function return:
 *   The function not return ant thing
 *
 * function performs the following steps:
 *   This is main cycle function which ask for user what to do
 */
```

```
/*
 * The function get:
 *   char *string - The string when need delete new line
 *
 * The function return:
 *   Nothing be returned
 *
 * function performs the following steps:
 *   Deliting the new line symbol from string
 */
```

```
/*
 * The function get:
 *   char *input - Pointer when be located input
 *   const int max_size - The max size be located in the input string
 *
 * The function return:
 *   The function return 1 - if success 0 - failed get input
 *
 * function performs the following steps:
 *   Geting input from user and put it to pointer.
 */
```
